Vyo.

Your project as a poster, in words anyone can read.

Caught. Jargon, file paths and text that runs into the picture stay in the sieve.

Through. Only plain words reach the poster.

How it works
Vyo reads your project and draws its parts as a picture. It checks every word around the picture, then writes a PNG and a PDF.

What stays out
Jargon, file paths and text that runs into the picture fail the check. Vyo names what to fix, and the check keeps failing until nothing is caught.

Counted for you
You write the headline and the notes. Vyo writes every count itself from your code, so no number on the poster is typed by hand.

Not built yet: this layout on the 4:5 sheet, a river for small projects
