Vyo.

Your whole project, folded into one page.

Many files. Vyo reads the folders of a project and counts what it finds.

One page. A picture of the parts, with words a stranger can follow.

How it works
Point Vyo at a project. It reads the files, draws the parts as one picture, and checks the words around it.

Checked before you send
Vyo turns away jargon, file paths, leftover placeholder text and words that run into the picture, so the page reads clean.

What you get
A PNG and a PDF of the same page, ready to send to a client, a colleague or a friend.

Not built yet: this frame on a 4:5 sheet, any file but a PNG or a PDF
